Job Description: Front-end developer

We are currently looking for a Front-end Developer to join our team. While the main focus will be on front-end development, any experience with back-end development, particularly with AWS Amplify, is a significant plus.

Your main responsibilities will be:

1. Implementing intuitive and user-friendly interface for apps.
2. Ensuring the app's responsiveness and smooth operation across various devices.
3. Using AWS Amplify to integrate back-end services.
4. Fixing front-end bugs and enhancing application's performance.
5. Collaborating with the back-end team to improve usability, if you have back-end skills.
6. Keeping abreast of the latest front-end technology trends and implementing them, as appropriate.

Skills:
- Proficient understanding of web markup, including HTML5, CSS3.
- Experience with JavaScript frameworks like React, Vue, Angular, or similar.
- Experience with AWS, Azure or similar cloud technologies.

Languages:
- English (required)
- French

Location
- Hybrid remote (1300 Wavre)
