

Job Description: Infrastructure engineer

We are seeking an Infrastructure engineer / Cybersecurity Engineer to join our team. The candidate will be handling infrastructure as code with full CI/CD pipeline integration. If you have a keen interest in security aspects and are looking to apply your technical skills in a challenging environment, we would be delighted to have you on our team.

Your main responsibilities will be:

- Develop and manage Azure/AWS infrastructure using Infrastructure-as-Code (IaC) model.
- Design and implement robust CI/CD pipelines for the Azure/AWS infrastructure.
- Set up and maintain Citrix infrastructure on Azure.
- Manage data access in compliance with customers constraints.
- Ensure system and data security across all platforms and projects.

Skills:

- Proficient understanding of DevOps/DevSecOps principles.
- Experience in Azure, AWS, and CI/CD pipeline setup and management.
- Experience with SaaS architectures on public clouds.
- Experience with Citrix Cloud and setting up a Desktop as a Service environment.
- Strong understanding of cybersecurity principles and their application.
- Ability to work in an environment with strict constraints on data access.
- Excellent communication and collaboration skills.

Languages:

- English (required)
- French

Location

- Hybrid remote (1300 Wavre)
